

Businesses face many reporting challenges, and the Business Discovery of QlikView is second-to-none in meeting these.

But even with all this power; reports and a style of working are often required that it can't satisfy.

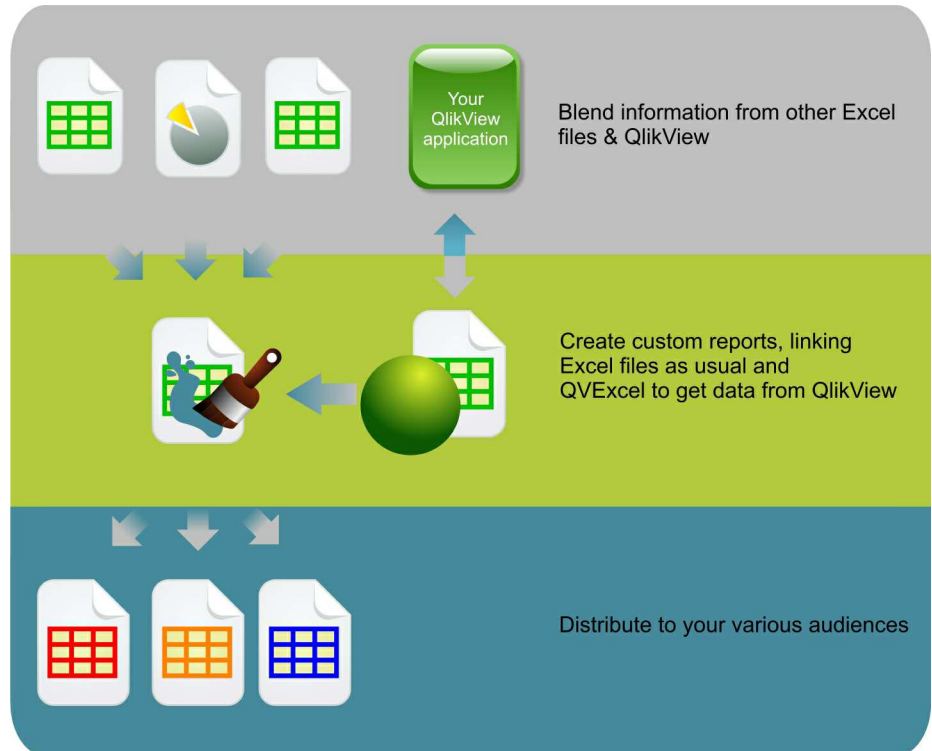

So, Excel is often used to fill that need; it's benefits include:

- create reports with complicated layouts,
- directly correct report errors,
- flexible for 'what-if' and budget models,
- ad-hoc reporting,
- reports can be used both internally and externally, for further collaboration

Excel Should be a Part of BI Reporting

Business Intelligence (BI) products, such as QlikView, are favoured by IT departments as it gives powerful analytics with a single repository of data.

But because there isn't any full QlikView-Excel integration, Excel must be used in isolation. As such, some problems arise:

Protect and Extend Your QlikView and Excel Investments

- static data is exported,
- copying and pasting data into spreadsheets,
- reports take longer to produce,
- authors create their own data models,
- multiple versions of the truth exist,
- reports are error prone,
- devalues the BI investment,
- decision makers are faced with information that is inconsistent and unreliable.

Because of its need and usefulness, Excel should be part of BI reporting.

Many issues can be overcome by using QVExcel, which is an Excel Add-In that fully integrates with QlikView.

A Single Version Of The Truth. Every Time.

Benefits and Features

Benefits of QVExcel include:

- all the benefits of Excel,
- use QlikView's associative engine, within Excel,
- a single version of the truth,

- a controlled way of getting data out of QlikView,
- direct access to the data model and security policies that are already defined,
- reduced risk of errors,
- extends the existing BI platform and it's investment to more users.

Reduce The Risks Of Using Excel

Excel-Like Formulas

Use simple formulas in your spreadsheets that create a live link to data in QlikView. So, place any value into any cell.

This allows you to create 'Pixel Perfect' reports that always reflect the latest data.

Quick To Learn

Once QlikView values are in the spreadsheet, they

can be treated like any normal Excel values.

So, there is very little extra for people to learn and they can quickly start creating reports.

Make Listbox Selections

Listboxes are available within Excel. Use them to make selections and your Excel reports will update to reflect your selections.

So, create one report with many variations.

Full Object & Field Model

You have access to all the objects and fields in the QlikView application, which you can interact with to bring data into your spreadsheet.

Full Visual Basic API

An advanced feature allows you to fully control the QVExcel add-in through Excel's VBA.

This means you can automatically connect to applications, make listbox

selections, layout PivotTables into income statements and send them out to people.

Professional Reports That Are Always Up-To-Date

Technical Specifications

QVExcel uses QlikView Server to access the QlikView applications. So many users can access the QlikView application at the same time.

QVExcel makes use of QlikView's security, so users are authenticated before they can access the data.

QVExcel requirements

- QlikView Server 9.x or later
- MS Excel (for Windows) 2003, 2007 or 2010
- Microsoft Windows 2003, 200
- .NET Framework 3.5

About Industrial CodeBox

QVExcel is developed by Industrial CodeBox, a QlikView Technology Partner since 2005, specialising in QlikView integration.

As the original developers of the QlikView Workbench & Sharepoint Web Parts, Industrial CodeBox has unrivalled QlikView integration skills and knowledge, which go in to making our products innovative and extend your investment in QlikView.

Why You Can Trust Buying From Industrial CodeBox

1. Excellence built on experience

- We develop high quality solutions, which your business can rely on every day
- We're not limited by what we know today, so you get innovative solutions that are built to last

2. A proven history developing QlikView integration solutions

- We originally developed the QlikView Workbench and SharePoint Web Parts
- We have a unique experience in working with QlikView and alongside QlikTech
- We are able to solve the most difficult QlikView challenges with the best possible route

3. We will help to develop your team

- We use the latest communication technologies to provide first class training and support to all our global customers

4. You can excite your QlikView customers with innovative solutions

- Give your customers new ways of using QlikView to improve and protect their existing investments

5. You always deal with knowledgeable and experienced staff

- We've been a QlikView Technology Partner since 2005
- We have unparalleled QlikView integration knowledge

6. We will keep you informed

- We use social media such as QlikCommunity, Twitter and LinkedIn to keep you up-to-date
- We'll let you know about new versions as they become available
- We have an 'early adopter' scheme for those who want to try the latest products before anyone else

7. Solutions that will meet your specific needs

- Solutions are designed with the user's experience and challenges in mind so that they are easy to use and logical

8. Support when you need it

- Great documentation for all technical levels so you're not left wondering how something works
- A wide variety of online documentation is available so when we're closed, you're still able to find answers

9. A personal service

- We work with you to understand and solve your pains
- We are flexible in our approach to do business with you
- We are easy to do business with

10. Trusted to deliver

- We constantly deliver high quality solutions for QlikView Partners and QlikTech, often directly with their customers
